Parking-Ku Background

Where do i park when there is not space ?

Background

With the growth of malls and other popular destinations in large cities, most people are having difficulty finding a parking spot because there are limited spaces available, causing people to park wherever they can find a space.

As a result, we came up with the idea to create an online-based parking app that allows customers to find parking spots easily.

Cancel

Project Definition

This project is focused on developing an application for reserving parking spots in crowded areas, specifically malls. The app is named Parking-Ku, and its main goal is to book parking spaces before you enter the mall as a visitor.

All you have to do is download the app, create an account, log in, and then select the available parking space on the app's screen.
